Treating or screening for cancer, e.g. renal or urogenital cancer - by modulating or detecting tumour associated human complement Factor H related antigen, or nucleic acid encoding it
                                                                                                                                                                                                                                                                                                                                                          Complement factor H; tumour associated antigen; renal cancer; urogenital cancer; medicament; modulator.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This partial protein sequence represents a region of the human tumour associated complement factor H (CFH). This sequence is used in the identification of complement factor H related proteins and antigens isolated from clone prBB9FH410 (see W39155). The detection of such proteins and a CFH antigens can be used in screening or for the treatment of renal or urogenital cancer, e.g. bladder, cervical or prostate cancer. Agents that may modulate this antigen could be used the manufacture of a medicament for the treatment of a tumour cell.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This partial protein is found in clone pRRB9FH410 and represents a complement factor H related protein with homology to a region of the human tumour-associated complement factor H (CPH). The detection of this protein and a CPH antigen can be used in screening or for the treatment of renal or urogenital cancer, e.g. bladder, cervical or prostate cancer. Agents that may modulate this antigen could be used in the manufacture of a medicament for the treatment of a tumour cell.
                                                                                                                                                                                                                                                                                                                                                                                                                      Human CR1 protein LHR-A SCR fragment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Example 6B; Fig 6B; 104pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     DЬ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CC protein or fragment is expressed as a cell-surface protein on the surface protein or tragment is expressed as a cell-surface protein on the surface protein on the surface complement regulatory activity of full clength human CRI as expressed on erythrocytes. The CRI function in vivo cmay be mediated through the inhibition of complement pathway enzymes. The soluble CRI protein exhibits a complement regulatory activity, and this may be used to prevent reperfusion injury, inhibit Arthus reaction, and centrophil mediated tissue damage, and reduce myocardial infarct size, and inflammation. The CRI protein and its fragments can also be used in the treatment of conditions which involve unwanted complement activity, c. e.g. shock lung, tissue damage due to burn, or ischemic heart conditions, and autoimmune disorders. CRI proteins, analogues, derivatives, and antipodies are used in assays, and diagnostics. The present sequence cepresents the short consensus repeat (SCR) fragments of human CRI protein long homologous repeat (LHR)-A sequence.

                                                                                                                                                              cysteine residue bonds with the fourth. This secondary structure is responsible for the conformational flexibility of the C4bp monomer. The invention covers fusion proteins in which the monomer sequence, or a specified subfragment of it, e.g. having 5, 4, 3 or 1 SCR(s) is fused to the C-terminal of a protein such as a viral receptor, cell ligand, a bacterial, viral or parasitic immunogen, enzyme, cytokine, toxin, etc. See also 013243-51.
                                                                                                                                                                                                                                                                                                                                                   This sequence was deduced from human hepatocyte (Hep G2) cDNA obtained following PCR amplification. The protein is a monomer containing 8 SCRs. Each SCR forms a looped domain due to the presence of two intradomain disulphide bonds (only the disulphide bonds of SCR8 are labelled in the Features Table). Within each SCI the first cysteine residue bonds with the third and the second
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New C4 binding protein fusion proteins and DNA encoding them comprise assemblies of C4bp monomers linked to functional moiety, e.g. AZT, useful as delivery vehicles in diagnosis and therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Disulfide-bond
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     N-PSDB; Q13242
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Pasek MP, Winkler G,

The cDNA clone designated CR1-4 was described in J.Exp.Med.(1988) 168:1255-1270. It encodes the first 8 and a half amino terminal SCRs of CR1. The invention concerns analogues of "regulator of complement activation" proteins or truncated, hybrid or recombinant forms of them. CR1-4 is a preferred truncated form and a number of specified substitution variants of it are disclosed in which certain
                                                                                                                                        Complement activity regulator protein analogues - useful for treating auto: immune diseases, to suppress transplant rejection,

The substitution variant given here has increased C3b-binding. The specification does not contain the CRI-4 sequence; the sequence given here was constructed from the full-length CRI amino acid sequence having GENESEQ accession number R11810 and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              descriptions in the disclosure.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             N-terminal fragment. The invention relates to a soluble derivative (A) of a soluble polypeptide (I), which comprises at least 2 heterologous membrane-binding elements (MBE) of low membrane affinity covalently associated with (I). MBE interact, independently and with thermodynamic additivity, with components of cellular or artificial membranes exposed to extracellular fluids. (A) are used to treat disorders treatable with (I) itself, specifically inflammation or any other complement related disorder (e.g. neurological disease, graft rejection, myocardial infarction, sepsis, rheumatoid arthritis and many others; including application to indwelling devices) and thrombolytic disease, but also to treat allergy, induce weight loss, to treat ischaemia or asthma and as

                                                                                                                                                                                                                                                                                       The invention relates to a human C3B/C4B receptor (CRI) protein. The CRI protein or fragment is expressed as a cell-surface protein on the surface of a non-human cell and exhibits a complement regulatory activity of full-length human CRI as expressed on erythrocytes. The CRI function in vivo may be mediated through the inhibition of complement pathway enzymes. The soluble CRI protein exhibits a complement regulatory activity, and this may be used to prevent reperfusion injury, inhibit Arthus reaction, and neutrophil mediated tissue damage, and reduce myocardial infarct size, and inflammation. The CRI protein and its fragments can also be used in the treatment of conditions which involve unwanted complement activity, e.g. shock lung, tissue damage due to burn, or ischemic heart conditions, and autoimmune disorders. CRI proteins, analogues, derivatives, and anti-repersors the human cRI protein assays, and diagnostics. The present sequence

                                This is full-length CR1 protein, and shortened forms are new, lacking the transmembrane region. The proteins and fragments bind C3b and/or C4b, have cofactor activity and inhibit C3 and C5 convertase activity. In the sequence, x=untranslated region. This has 7 short consensus repeats (CR) of 4 long direct homologous repeats (LHR) (see fig. 10 in patent). Deletion mutants, eg LHR-A for binding of C4b, and LHR-C for C3b binding, be made, and LHR-B and -C can detect CR2 sequences. They are useful in diagnosing and treating immune disorders, and prevent

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The cDNA clone designated CR1-4 was described in J.Exp.Med.(1988) 168:1255-1270. It encodes the first 8 and a half amino terminal SCRs of CR1. The invention concerns analogues of "regulator of complement activation" proteins or truncated, hybrid or recombinant forms of them. CR1-4 is a preferred truncated form and a number of specified substitution variants of it are claimed in which certain positions in SCR-2 which have been identified as important for the degree of C3b- and C4b-binding are substituted by amino acids from the corresponding positions in SCR-9. The specification does not contain the CR1-4 sequence; the sequence given here was constructed from the full-length CR1 amino acid sequence having GENESEO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              accession number R11810 and descriptions in the disclosure.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 11; Fig 2 and R11810; 23pp; English

CRI-4 is a preferred truncated form and a number of specified substitution variants of it are claimed in which certain positions in SCR-1 which have been identified as important for the degree of C3b- and C4b-binding are substituted by amino acids from the corresponding positions in SCR-8. The specification does not contain the CRI-4 sequence; the sequence given here was constructed from the full-length CRI amino acid sequence having GENESEQ accession number R11810 and descriptions in the disclosure.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The CDNA clone designated CR1-4 was described in J.Exp.Med.(1988) 168:1255-1270. It encodes the first 8 and a half amino terminal SCRs of CR1. The invention concerns analogues of "regulator of complement activation" proteins or truncated, hybrid or recombinant complement activation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Complement activity regulator protein analogues - useful for treating auto:immune diseases, to suppress transplant rejection,
                                                                                                                                                                                                  169
                                                                                                                                                                                                                                    169

                                                                                                                                                                                                              Matches
                                                                                                                                                              Query Match
                                                                                                                                                                                                                                                The cDNA clone designated CR1-4 was described in J.Exp.Med.(1988) 168:1255-1270. It encodes the first 8 and a half amino terminal SCRs of CR1. The invention concerns analogues of "regulator of complement activation" proteins or truncated, hybrid or recombinant forms of them. CR1-4 is a preferred truncated form and a number of specified substitution variants of it are claimed in which certain positions in SCR-2 which have been identified as important for the degree of C3b- and C4b-binding are substituted by amino acids from the corresponding positions in SCR-9. The specification does not contain the CR1-4 sequence; the sequence given here was constructed from the full-length CR1 amino acid sequence having GENESEO accoration number 501810 and Associations in the 1011-length CR1 amino acid sequence having GENESEO
                                                                                                                                                                                                            Sequence
                                                                                                                                                                                                                                        accession number R11810 and descriptions in the disclosure.

        The cDNA clone designated CR1-4 was described in J.Exp.Med.(1988) 168:1255-1270. It encodes the first 8 and a half amino terminal SCRs of CR1. The invention concerns analogues of "regulator of complement activation" proteins or truncated, hybrid or recombinant forms of them. CR1-4 is a preferred truncated form and a number of specified substitution variants of it are claimed in which certain specified substitution variants of it are claimed in which certain
                                                                                                                                                  Complement activity regulator protein analogues - useful for treating auto:immune diseases, to suppress transplant rejection.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         degree of C3b- and C4b-binding are substituted by amino acids from the corresponding positions in SCR-9. The specification does not contain the CR1-4 sequence; the sequence given here was constructed from the full-length CR1 amino acid sequence having GENESEQ accession number R11810 and descriptions in the disclosure.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence
                                                                                                                                                                                                                                                                                                                short consensus repeat; regulator of complement activation; C3b binding; C4b binding; human complement type 1 receptor.

CR1-4 is a preferred truncated form and a number of specified substitution variants of it are claimed in which certain positions in SCR-2 which have been identified as important for the degree of C3D- and C4D-binding are substituted by amino acids from the corresponding positions in SCR-9. The specification does not contain the CR1-4 sequence; the sequence given here was constructed from the full-length CR1 amino acid sequence having GENESEQ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The cDNA clone designated CR1-4 was described in J.Exp.Med.(1988) 168:1255-1270. It encodes the first 8 and a half amino terminal SCRs of CR1. The invention concerns analogues of "regulator of complement activation" proteins or truncated, hybrid or recombinary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       accession number R11810 and descriptions in the disclosure

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Run on:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Post-processing: Minimum Match 0%
  Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

MOI. Biol. 232:268-284(1993).

11. FUNCTION: FACTOR H FUNCTIONS AS A COFACTOR IN THE INACTIVATION C3B BY FACTOR I AND ALSO INCREASES THE RATE OF DISSOCIATION OF C3BBB COMPLEX (C3 CONVERTASE) AND THE (C3B)NBB COMPLEX (C5 CONVERTASE) IN THE ALTERNATIVE COMPLEMENT PATHWAY.

12. SIMILARITY: CONTAINS 20 SUSHI (SCR) REPEATS.

13. CAUTION: REF. 2 SEQUENCE DIFFERS FROM THAT SHOWN FROM POSITION 341 ONWARD DUE TO A FRAMESHIFT.
                                                                                                                                                                                                                                                                                     REPEAT

IT BINDS AS A COFACTOR TO C39/C4B INACTIVATOR CC ALSO ACCELERATES THE DEGRADATION OF THE C4BC2A COMPLEX (C3) CONVERTASE) BY DISSOCIATING THE COMPLEMENT FRAGMENT C4B. IT COMPLEXACTS ALSO WITH ANTICOAGULANT PROTEIN S CC CALM BINDS C4B. IT INTERACTS ALSO WITH ANTICOAGULANT PROTEIN S CC CALM BINDS C4B. IT INTERACTS ALSO WITH ANTICOAGULANT PROTEIN S CC CALM BINDS C4B. IT INTERACTS ALSO WITH ANTICOAGULANT PROTEIN S CC CAND WITH SERUM AMYLOID P COMPONENT.

CC INDUST: DISULFIDE-LINKED COMPLEX OF C4BP ALPHA AND BETA CHAINS OF A SOO KDA COMPLEX OF A POSSIBLE SORTS: A 570 KDA COMPLEX OF 7 ALPHA CHAINS OR D 1 BETA CHAIN A 530 KDA HOMOHEPTAMER OF ALPHA CHAINS OR A 500 KDA COMPLEX OF A ALPHA CHAIN AND HOMOPOLYMER SUPPORTS TENTACLES, EACH WITH THE CITISUE SPECIFICITY: CHYLOMICRONS IN THE PLASMA.

CC I- SIMILARITY: CONTAINS 8 SUSHI (SCR) REPEATS.

CC -- SIMILARITY: TO C4BP BETA CHAIN AND TO PIG APOLIPOPROTEIN R.

CC -- CAUTION: IT IS UNCERTAIN WHETHER MET-1 OR MET-17 IS THE INITIATOR.

IT BINDS AS A COFACTOR TO C3B/C4B INACTIVATOR (C3BINA), WHICH THEN HYDROLYZES THE COMPLEMENT FRAGMENT C4B. IT ALSO ACCELERATES THE DEGRADATION OF THE C4BC2A COMPLEX (C3 CONVERTASE) BY DISSOCIATING THE COMPLEMENT FRAGMENT C2A. ALPHA CHAIN BINDS C4B. IT INTERACTS ALSO WITH ANTICOAGULANT PROTEIN S AND WITH SERUM AMYLOID P COMPONENT.

-1- FUNCTION: MCP IS AN IMPORTANT MEMBRANE PROTEIN FOR PROTECTING HOST CELLS FROM DAMAGE BY COMPLEMENT. MCP POSSESSES COFACTOR ACTIVITY FOR INACTIVATION OF C3B AND C4B BY SERUM FACTOR I. THIS WOULD ALLOW MCP TO REGULATE THE COMPLEMENT SYSTEM AT THE LEVEL OF THE C3 CONVERTASES, MAY BE INVOLVED IN THE FUSION OF THE SPERMATOZOA WITH THE OCCYTE DURING FERTILIZATION. MAY ACT BY PREVENTING COMPLEMENT ACTIVARION AT THE FETO-MATERNAL INVERFACE ON THE SPERMATOZOA WITH SYNCYTIOTROPHOBLAST LAYER OF PLACENTA.

-1- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

-1- ALTERNATIVE PRODUCTS: AT LEAST 14 FORMS ARE PRODUCED BY ALTERNATIVE SPLICING. THE FORM SHOWN IS THE TRANSCRIPT A. THE GAMMA ISOFORM (TRANSCRIPTS A AND B) IS PREFERENTIALLY EXPRESSED IN EBU-B CELLS AND LEUKEMIC CELLS. THE 66 KDA ALPHA ISOFORM AND THE EBY-B CELLS AND LEUKEMIC CELLS. THE 65 KDA ALPHA ISOFORM FOUND IN ALL TISSUES EXCEPT SPERM CORRESPOND TO THE TRANSCRIPTS C AND D, AND THE TRANSCRIPTS A DOFF RESPECTIVELY. THE EXON 9 IS SPECIFICALLY DELETED IN SOME PLACENTAE. THE EPSILON ISOFORM CORRESPONDS TO THE TRANSCRIPTS I
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             -i-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       protein (CD46) gene of the human complement system and comparison
a membrane cofactor protein like genetic element.";

"Bovine C4b binding protein. Molecular cloning of the alpha- and beta-chains provides structural background for lack of complex formation with protein S.";

J. Immunol. 153:4190-4199(1994).

-I- FUNCTION: C4BP CONTROLS THE CLASSICAL PATHWAY OF COMPLEMENT ACTIVATION. IT BINDS AS A COFACTOR TO C3B/C4B INACTIVATOR (C3BINA), WHICH THEN HYDROLYZES THE COMPLEMENT FRAGMENT C4B. IT ALSO ACCELERATES THE DEGRADATION OF THE C4BC2A COMPLEX (C3 CONVERTASE) BY DISSOCIATING THE COMPLEMENT FRAGMENT C2A. ALPHA CHAIN BINDS C4B. IT INTERACTS ALSO WITH SERUM ANYLOID P COMPONENT.

-I- SUBUNIT: DISSILFIDE-LINKED COMPLEX OF C4BP ALPHA AND BETA CHAINS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Bos taurus (Bovine).

C4B AND C3B ARE LOCALLY GENERATED DURING C4 AND C3 ACTIVATION.

INTERACTION OF DAF WITH CELL-ASSOCIATED C4B AND C3B POLYPEPTIDES INTERFERES WITH THEIR ABILITY TO CATALYZE THE CONVERSION OF C2 AND FACTOR B TO ENZYMATICALLY ACTIVE C2A AND BB AND THEREBY PREVENTS THE FORMATION OF C4B2A AND C3BBB, THE AMPLIFICATION CONVERTASES OF THE COMPLEMENT CASCADE.

-I- FUNCTION: ALSO ACTS AS THE RECEPTOR FOR ECHOVIRUS 7 AND RELATED VIBUSES (ECHOVIRUSES 13, 21, 29 AND 33).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    decay-accelerating factor in Cromer blood group phenotypes.";

POLYMORPHISM: DAF IS RESPONSIBLE FOR THE CROWER BLOOD GROUP
SYSTEM. IT CONSISTS OF AT LEAST SEVEN HIGH-INCIDENCE (CR(A),
TC(A), DR(A), ES(A), WES(B), UMC, AND IFC, AND LOW-INCIDENCE
(TC(B), TC(C), AND WES(A)) ANTIGENS THAT RESIDE ON DAF. IN THE
CROMER PHENOTYPES DR(A-), AND INAB THERE IS REDUCED OR ABSENT
EXPRESSION OF DAF, RESPECTIVELY. IN THE CASE OF THE DR(A-)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SUBCELLULAR LOCATION: ATTACHED TO THE MEMBRANE BY A GPI-ANCHOR. ALTERNATIVE PRODUCTS: TWO FORMS OF DAF (DAF-2, SHOWN HERE, AND DAF-1) ARE PRODUCED BY ALTERNATIVE SPLICING OF THE SAME GENE. TISSUE SPECIFICITY: EXPRESSED ON THE PLASMA MEMBRANES OF ALL CELL TYPES THAT ARE IN INTIMATE CONTACT WITH PLASMA COMPLEMENT PROTEINS. IT IS ALSO FOUND ON THE SURFACES OF EPITHELIAL CELLS LINING EXTRACELLULAR COMPARTMENTS, AND VARIANTS OF THE MOLECULE ARE PRESENT IN BODY FLUTUS AND IN EXTRACELLULAR MATRIX.

DOMAIN: THE FIRST SUSHI DOMAIN (SCR1) IS NOT NECESSARY FOR
